Induction Dynamics® Showcases SolidDrive® Sound Transducer

Unique product presents growth opportunity.

New York, NY, October 29 2008 – Induction Dynamics® is pleased to present its futuristic SolidDrive® audio technology. SolidDrive® transforms walls, ceilings, furniture, even windows into high-fidelity loudspeakers.

SolidDrive® presents Security Professionals with a chance to expand their business into the growing distributed audio market. It is an absolutely unique product that can enhance sales and diversify services offered. SolidDrive® can be used as home stereo speakers in residential settings, and serves a number of functions for commercial properties. It can provide soft background music in stores and waiting rooms, or be used as an intercom. Install it on the inside of windows to deliver merchandising messages to passing customers outside.

“We decided to attend ISC because the future of home integration is in contractors who can do it all,” said Chris Combest, CEO of Induction Dynamics®, “SolidDrive® is a unique and exciting product that can help security professionals grow into new markets and revisit old customers. When dealers take the portable demo kit into the field, people are truly amazed at what they see and hear.”

About SolidDrive®

SolidDrive® uses high-powered neodymium magnets and dual symmetrically

opposed motors to produce sound from nearly any surface. For a completely invisible system, mount SolidDrive® behind drywall; for other applications, attach the SolidDrive® to glass, wood, walls, ceilings—nearly any surface will do. Connect the transducer to an amplifier and the result is omnidirectional sound with no “loud spots,” all you hear is evenly distributed sound with crystal clarity.

About Induction Dynamics®

Induction Dynamics® was founded in 1995 and is headquartered in Overland Park, KS. Induction Dynamics® designs and builds high-end loudspeakers using several patented technologies. Induction Dynamics® wide-ranging line of speakers and patented SolidDrive® sound transducer are available through an international network of authorized dealers. www.inductiondynamics.com 866.663.9770
